

IP Series Network Camera with Recording Software	Model: IP101
---	---------------------

This camera is a network-based digital surveillance device with a built-in web server for the purpose of remote monitoring and recording. It supports TCP/IP networking for live video transmission in the format of MPEG4 or MJPEG. You can easily operate the camera via the web browser or you can use the supplied video software for viewing and recording. Video surveillance over IP network infrastructure is available and easy from anywhere, anytime!

Note: The IP01 and IP02IR cameras are compatible with each other using the provided Web Management Software (you can control up to 16 IP01 or IP02IR network cameras simultaneously). However, these IP cameras are not compatible with the VR Series software. If you are using the VR Series software then you have to use one of the VR Series IP Cameras or Servers. Please feel free to call our office for more information.
